

Notes on how to integrate Alexa

PLEASE NOTE!

AT THE MOMENT, THE ALEXA SERVICE CAN ONLY BE USED WITH OUR LOUD-SPEAKERS UNDER ANDROID !

Dear buyer,

Please read the below instructions on how to use Alexa with our speaker:

- Please switch on the speaker and connect it to your smart device.
- Please install and start the LEICKE Smart Voice app from the Google Play Store.
- The app needs access to microphone and files - please allow it. If no access is granted, the app will not work and will show an error message.
- Log into Amazon through the app. Once the device is registered at Amazon you have to additionally log in on <https://alexa.amazon.de> and then allocate the right place etc. under settings.
- If all requirements are matched, you can start.
- To use voice recognition, press the Play / Pause button once.
- Alexa takes her time to think about your question.
Please be patient for about 5 seconds until she is ready to answer.
(Depending on the quality of the internet connection. We recommend using W-LAN.)

NOTE:

- Amazon Music does not work with the voice control or the LEICKE Smart Voice app for Alexa.
- While music is running, it will be difficult to recognize speech.
- A signal can be heard at the beginning of speech recognition.
